

Macro Economics, the study of the economy as a whole, attempts to answer many critical economic related questions. The author's intent underlying the text is to provide a basic structure of macroeconomics, concentrating on those three pillars for specific types of students. Macroeconomics shows that economies differ across countries and that they change over time. These observations provide both the motivation for developing macroeconomic theoretical models to bring them into knowledge and efforts to exploring a macroeconomics for formulating economic policy. Macroeconomics, however, is not a single story, but it provides a rich landscape for macroeconomic theory, while the basic principles of macroeconomics do not change from countries because the macroeconomic theoretical principles apply with flexibility and creativity for most changing circumstances. The chapters themselves are written in a modular format. Each chapter presents a part of the macroeconomics system that helps to build the macroeconomics. Each chapter contains not only an introduction of the material of total but also learning objectives, exercises, examples, and problems. Conceptual exercises and learning problems including macroeconomics and their interrelationships are given. The author's theoretical approach is methodically and systematically built in the text.
